

## ECS Cooling Trays

The solid cooling trays from ECS ensure optimum cooling for your product leading to higher yields for you. Thanks to their shape and additional fittings, the system is easily adjustable and very user friendly. ECS cooling trays are tailor-made for various products, each with their own specific cooling cycle. Over the last few years, we have established considerable experience as a consequence of which our company has obtained a reputation within the chemical industry as reliable and quality suppliers, with a thorough understanding of their work. Applications include strand lines and profile lines. The infeed tray can be separately adjusted from the extruder head.

Options include:

- height-adjustable strand guides
- various types of sieve
- gas / vapour extraction at various locations
- cover, with underpressure or overpressure
- dewatering system via air knife, possibly integrated in cooling tray with cover (overpressure) cooling tray or as separate module.
